

## Special Similarity

1. What does it mean if two figures are similar?
2. What is the difference between congruence and similarity?
3. Explain, in your own words, how to prove that two triangles are similar. Is there more than one way to do it?

For each pair of triangles, explain if you can prove them to be similar.

<i>The triangles</i>	<i>Similar or not?</i>	<i>How do you know?</i>
		
		
		

The triangles

Similar or not? How do you know?
